

Chris John B. Borigas

0928 675 5324 | chrisjohnbborigas@gmail.com | P-1 San Ramon, Tabaco City, Albay | <https://github.com/LilNewton>

Education

Bicol University College of Science
BS in Computer Science; Cum Laude; 1.72

Legazpi City, Albay
June 2025

Relevant Coursework: Intermediate Programming, Digital System Designs, Data Structures and Algorithms, Applications Development and Emerging Technologies, Object-Oriented Programming, Information Management, Design and Analysis of Algorithms, Software Engineering, Artificial Intelligence, Networks and Communication, Human Computer Interaction, Information Assurance and Security, Ethics, Machine Learning and Security Algorithms, and Social Issues and Professional Practices

Technical Skills and Projects

Programming Languages: C, Java, Python, Javascript, CSS, Basic PHP
Frameworks: React.js, Streamlit, Basic Laravel
Design: Canva, Figma, and Krita
Version Control: Git, Github
Documentations: MS Word, Google Docs, Libre Office Writer, MS Excel, and Google Sheet

Relevant Experiences

Iraya Energies
Software Engineering Intern

Menara Binjai, Kuala Lumpur, Malaysia
June – July 2024

- Developed the Optical Character Recognition component of Raya, a chatbot for unstructured research data, within 240 hours of internship allowing the system to quickly take in text data from multiple documents.
- Managed the team’s communication with the clients such as communicating updates, and raising concerns and suggestions on development during weekly meetings to ensure the team meets the wants of the clients through clear and tangible project goals and deliverables.

Development Projects

Raya - Chatbot for Unstructured Research Data

- A chatbot which enables users to easily inquire about the contents of a document stored in a database.
- Implemented the Optical Character Recognition (OCR) using Python-tesseract for scanning text from documents.
- Developed the User Interface (UI) for the OCR function through Streamlit framework allowing the clients to easily utilize the program.

OLA: A Game of the Generals (GG) AI Strategy Engine Trained Using Self-play

- A Game of the Generals strategy engine trained using self-play with a detachable graphical user interface.
- Developed the functionality of the UI and User Experience (UX) of the website using Javascript through the React.js framework and styled using CSS.

Aidentifye

- An Eye Disease Recognition Web Application that identifies and displays possible present eye diseases on uploaded images.
- Conducted data collection and pre-processing for training the model that identifies eye diseases allowing our team to train the artificial intelligent model to a functional degree despite the lack of abundant data.
- Conducted testing of the web applications eye detection feature allowing my team to catch and fix errors early on.
